

Math 11 • Quadratic Functions

© Forrester Educational 2003 (www.MathBC.com)

Sketch (clearly show five points).

[#1] $y = 3(x - 2)^2 - 5$

[#2] $y = -\frac{1}{2}(x + 3)^2$

Sketch and then determine....
 the equation of the axis of symmetry.
 the maximum/minimum value
 the domain
 the range
 the x-intercept(s)
 the y-intercept

[#3] $y = -2(x - 1)^2 + 2$

Write the equations of the parabolas shown or described.

[#6] the vertex is $(5, -2)$ and it passes through $(1, -6)$

[#7] the maximum point is $(3, 1)$ and it is congruent to $y = 3x^2$

Key

$$y = 3(x-2)^2 - 5$$

$V(2, -5)$
 $a = 3$

$$y = -\frac{1}{2}(x+3)^2$$

$V(-3, 0)$
 $a = -\frac{1}{2}$

$$y = -2(x-1)^2 + 2$$

$V(1, 2)$
 $a = -2$

[#7] $y = -3(x-3)^2 + 1$
 congruent (same shape, same a)
 because the vertex is a maximum, a must be a negative
